Hand Arm Vibration; Daily Points Exposure Guide

Under the Vibration at Work Regulations 2005 employers must ensure that employees are not exposed to harmful levels of Hand Arm Vibration (HAV).

The Vibration at Work Regulations set two key values after which action must be taken. These are the Exposure Action Value (EAV) of an A(8) of 2.5 m/s^2 and an Exposure Limit Value (ELV) of an A(8) of 5.0 m/s^2 . Using the point system below these levels equate as follows. The EAV equals 100 points and the ELV equals 400 points.

To use chart

1. Identify machine vibration level on the left.
2. Compare the time of use with those at the bottom of the chart.
3. The point at which they meet indicates the operator's "Daily Exposure in points".
4. Compare this with the limit values on the right to identify action required.

Example

If a machine has a vibration level of 5 m/s^2 and it is used for $\frac{1}{2}$ an hour the operator would have been exposed to 25 points. If they then used another tool at 7.0 m/s^2 for 45 minutes they would have been exposed to 74 points, thus 99 points in total. This can then be compared against the column on the right to see that this is just below the EAV.

If you require further training or advice on vibration management please call SHREC Ltd on 07870661649 or email at enquiries@shrec.org.uk
